

OIL AND GAS SECURITY COURSE

ABOUT THIS COURSE

INTRODUCTION

Welcome to the Oil and Gas Security training course. Global energy and its demands are expected to rise by as much as 50% over the next decade and will mean even more extensive exploration and production activities by the Oil and Gas industry. A large proportion of this is expected to come from many parts of the undeveloped world, bringing more challenges to the operating companies and more importantly to the security of these operations. Security provides organisations with the freedom to operate in these fragile environments. It allows for more freedom of movement and productivity of its infrastructure and platforms, along with its exploration operations. Due to the ever changing climate, world views and politics, the security of operations within the oil and gas industry have become even more important and vast in its bid to keep up with the demands of the modern market.

COURSE AIM

To enhance the knowledge of the candidate in terms of Oil and Gas security.

COURSE LENGTH

E-Learning.

CERTIFICATION

ASTA Certified.

DELIVERY

This course is distance learning via e-learning, with the support of a dedicated tutor. For optimal experience you will be required to have access to the following:

- A PC or Laptop running Windows XP and above, or a Mac running OSX.
- Web browser such as Internet Explorer 7 or above (IE9 is recommended), Google Chrome, Firefox 3 or above, or Safari. Cookies and JavaScript will also need to be enabled.
- If you are using a tablet or smartphone, then applications can be downloaded to enable optimal delivery (these applications will be prompted by our system, when required).
- Internet connection speed of at least 256k, 3G or 4G, but we recommend over 1Mb.
- Assisted learning provides email/telephone support, plus online interaction with your tutor.
